This paper contains a lucid summary of the heat

exposed to solar radiation. It includes, as an example,
an analysis of the reduction in heat gain that can be
achieved by using blinds and heat absorbing glass. The
example is for a building in Rome, but the results are

Methods are described for the preparation and cutting

cross sections correspond more closely to reality in the
case of cutting thicknesses of 1 μ and are more clearly
visible than in the case of 6 μ cross sections. The regu-

viscose is studied over various distances by means of
the 1 μ cutting method. Furthermore, there is an
